Mechanical
Structure

The project's objective was to redesign a residential villa as a golf clubhouse using Revit BIM Package. The building consists of a basement, ground floor, and two above-ground floors. According to the design, the basement floor comprises the Back of the House (BOH) area (main kitchen, staff area and the golf cart parking);

the ground floor encompassing male changing rooms, administrative area, golf shop and cafeteria; the first floor comprising female changing rooms, meeting rooms and administrative area; and the second floor including bar and dining area.
