

Infrastructure Design Works for Suluq Town (1400 Acres)

Client

Libya Development and Reconstruction Fund (LDRF)

Scope of Work

Conceptual Design
Schematic Design
Detailed Design
Tender Documents

Location

Libya

Types of Activities

Civil
Communications and Security Systems
Electrical
Infrastructure
Roads

Suluq town, situated 60 km south of Benghazi and covering 6,495,000 m², faces significant infrastructure challenges, including issues with wastewater management, potable water supply, and road networks.

To address these issues, ECG is spearheading efforts to modernize and enhance the efficiency of existing infrastructure while developing new networks. The project also includes constructing a wastewater treatment plant and lifting stations, aligning with 2025 vision outlined in the Third Generation Project for Development Potentials and Alternatives.
